Managing mood is one of the **hardest challenges** in aphasia.

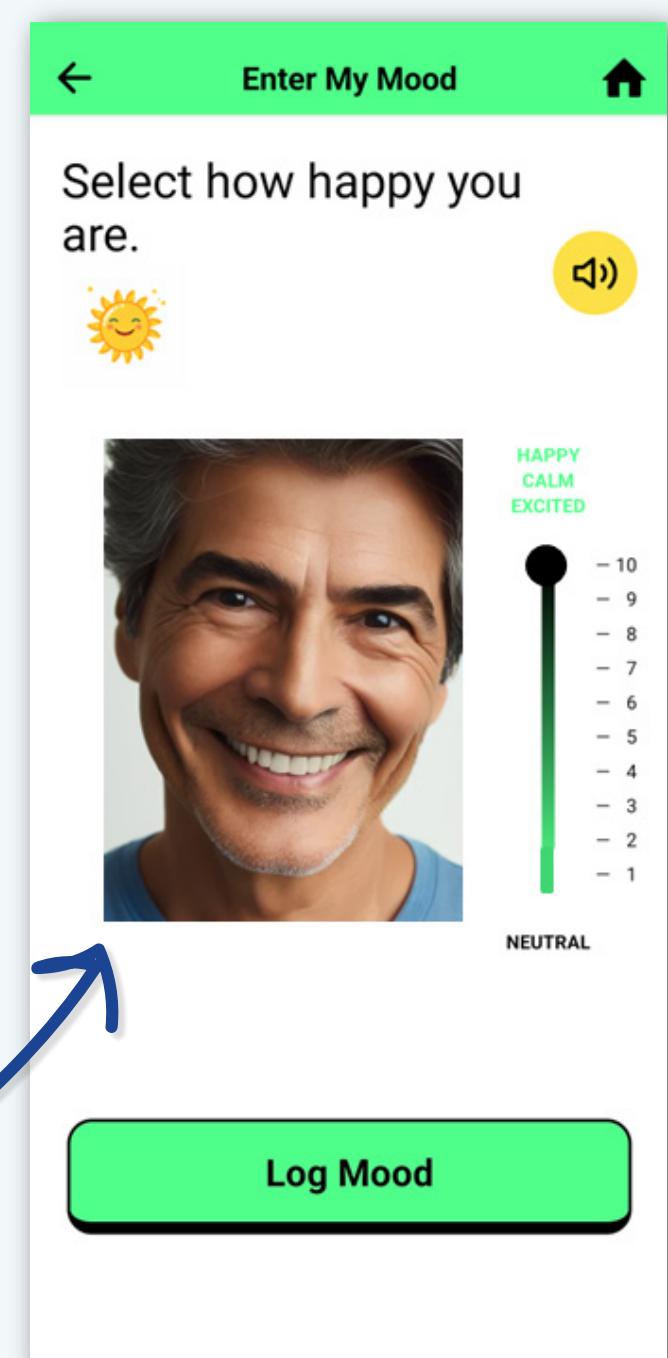

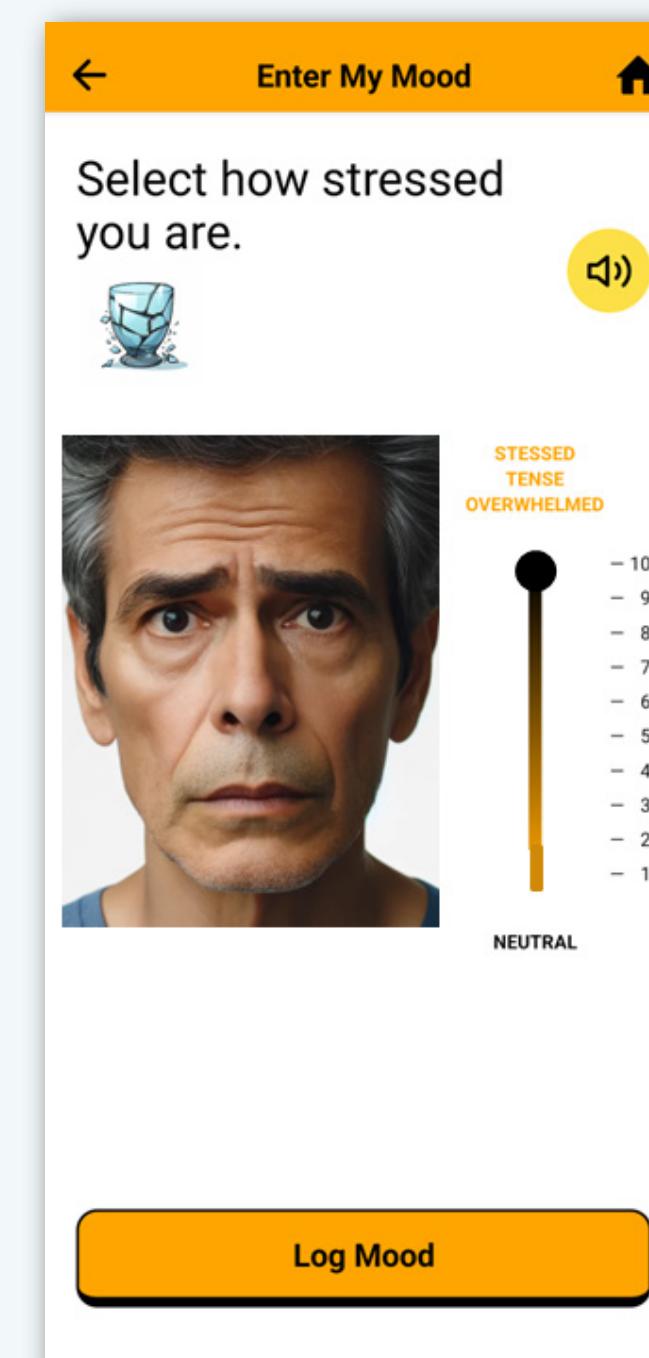

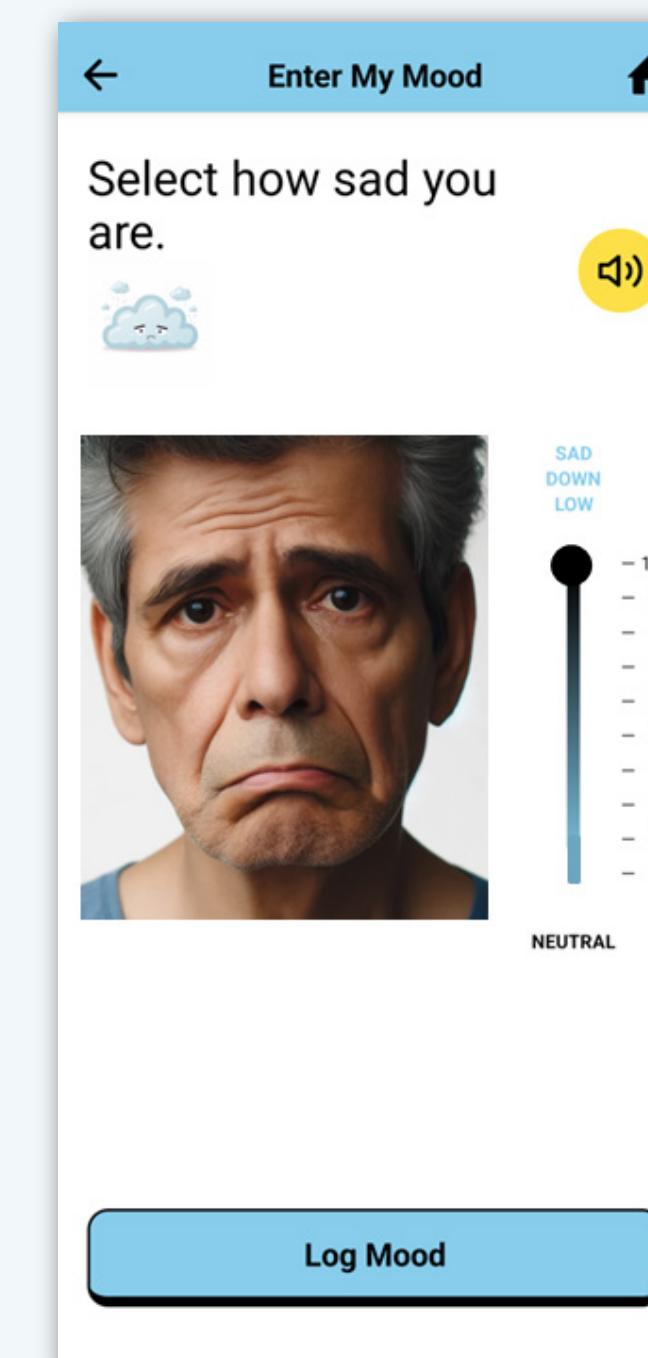

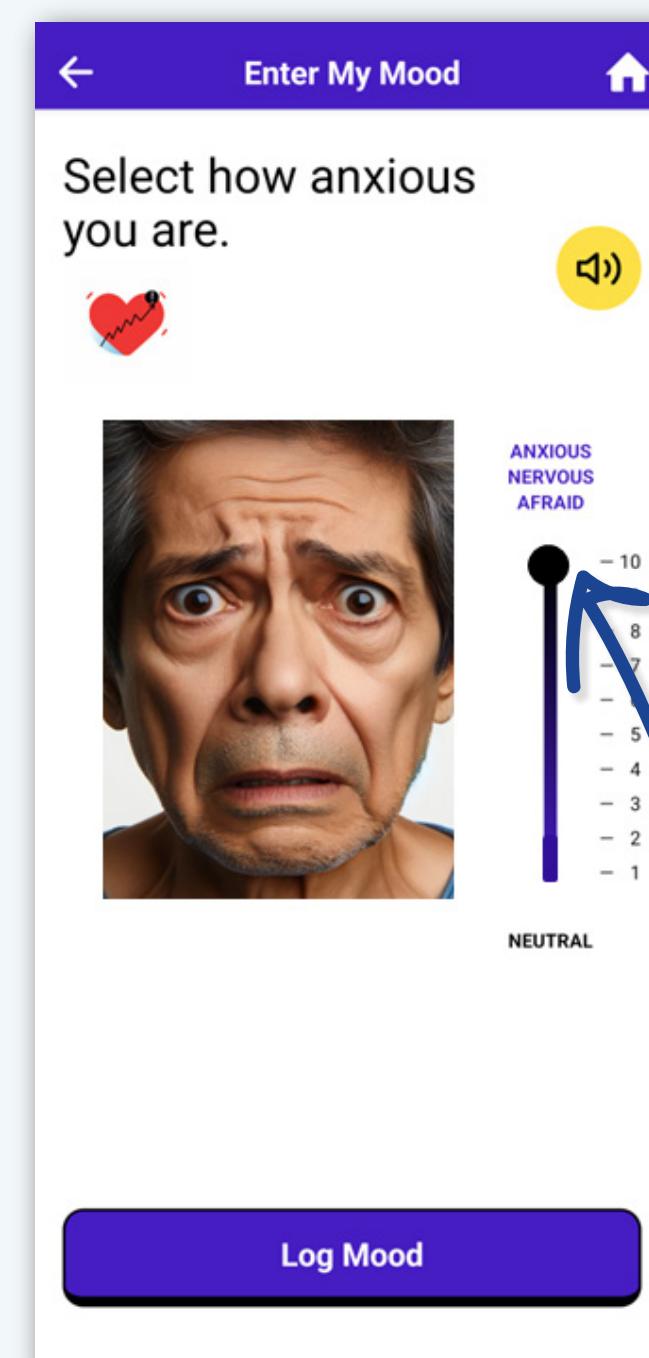

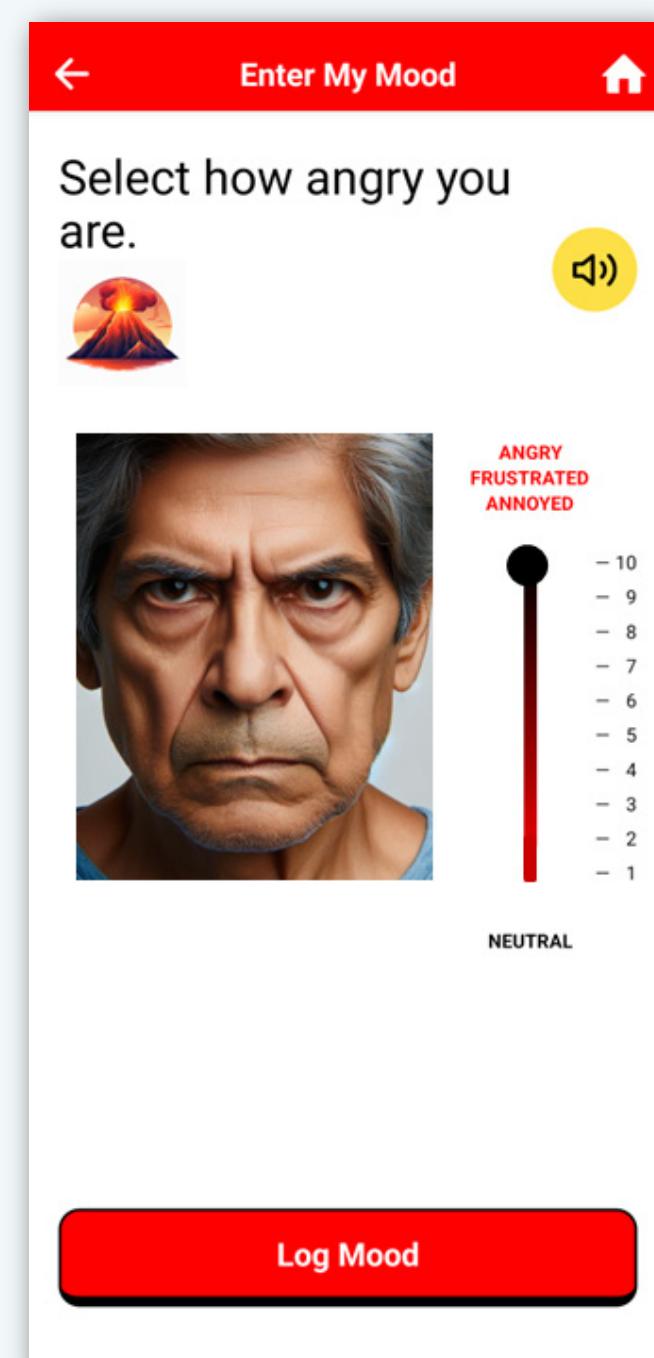

We designed a **Mood Tracker** app for aphasia **together**.

people with aphasia
carers
researchers

It helps people with aphasia **track** and **manage** mood over time.

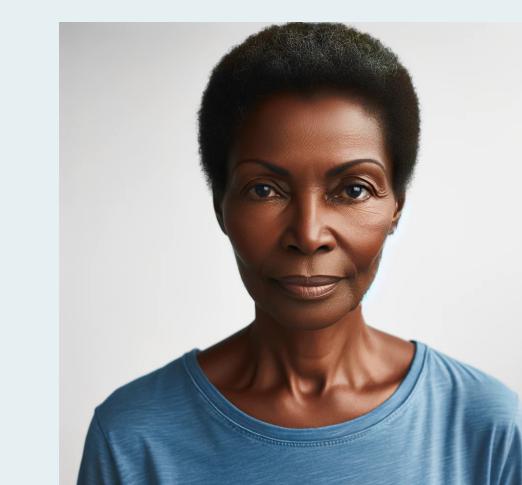

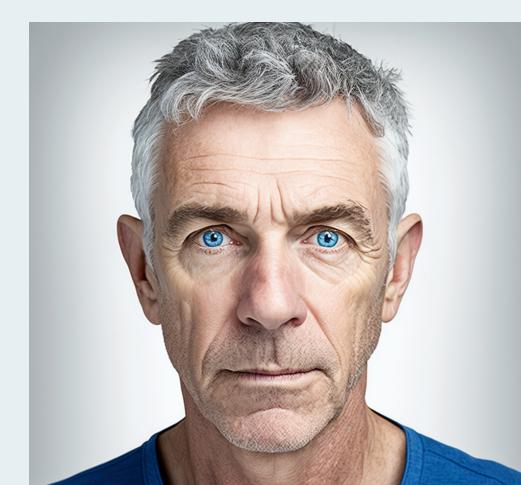

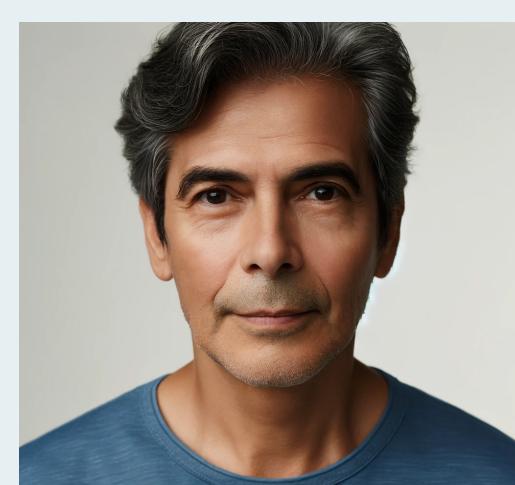

You can **rate** up to **five (5)** emotions each day:

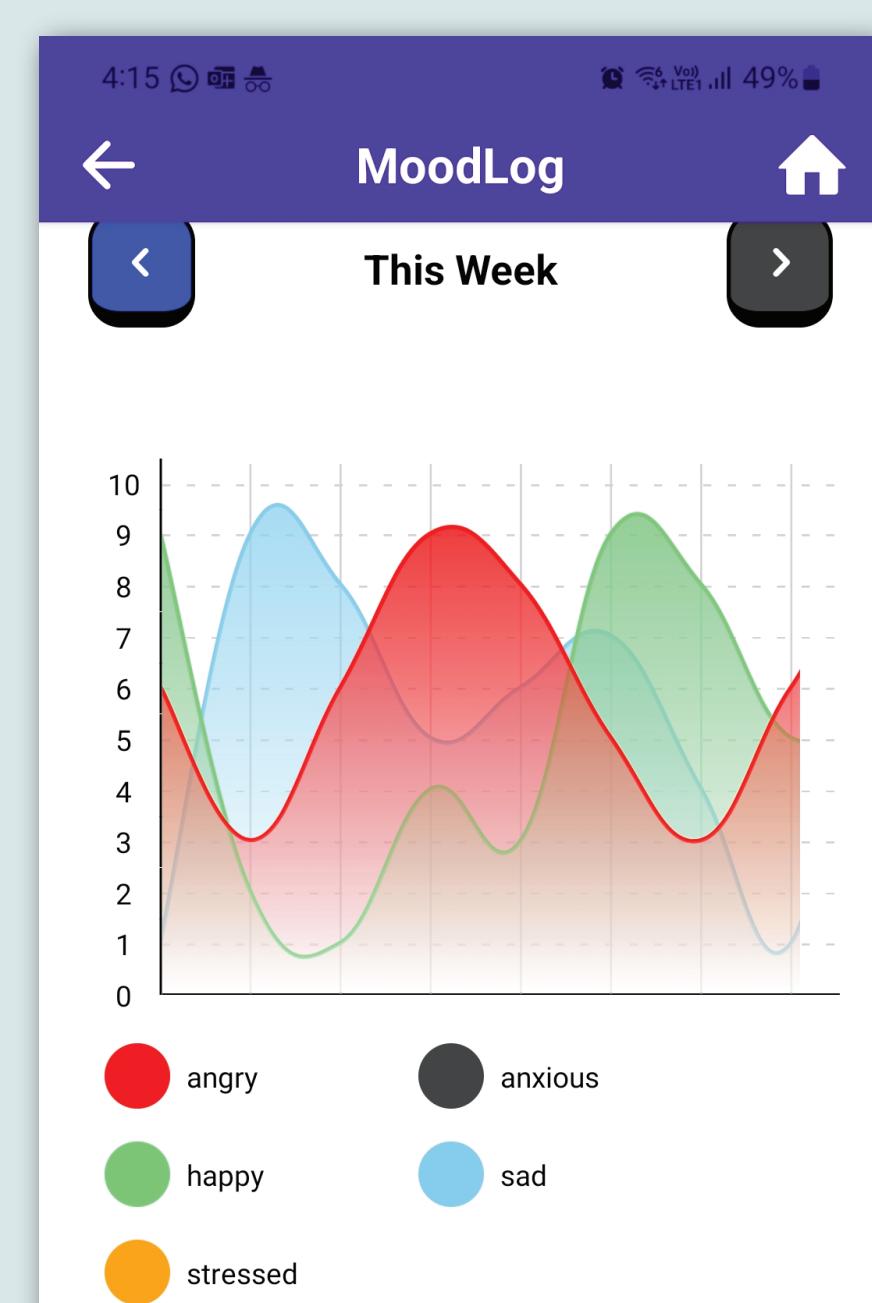

Drag to show your mood

Facial expressions change as you drag the slider

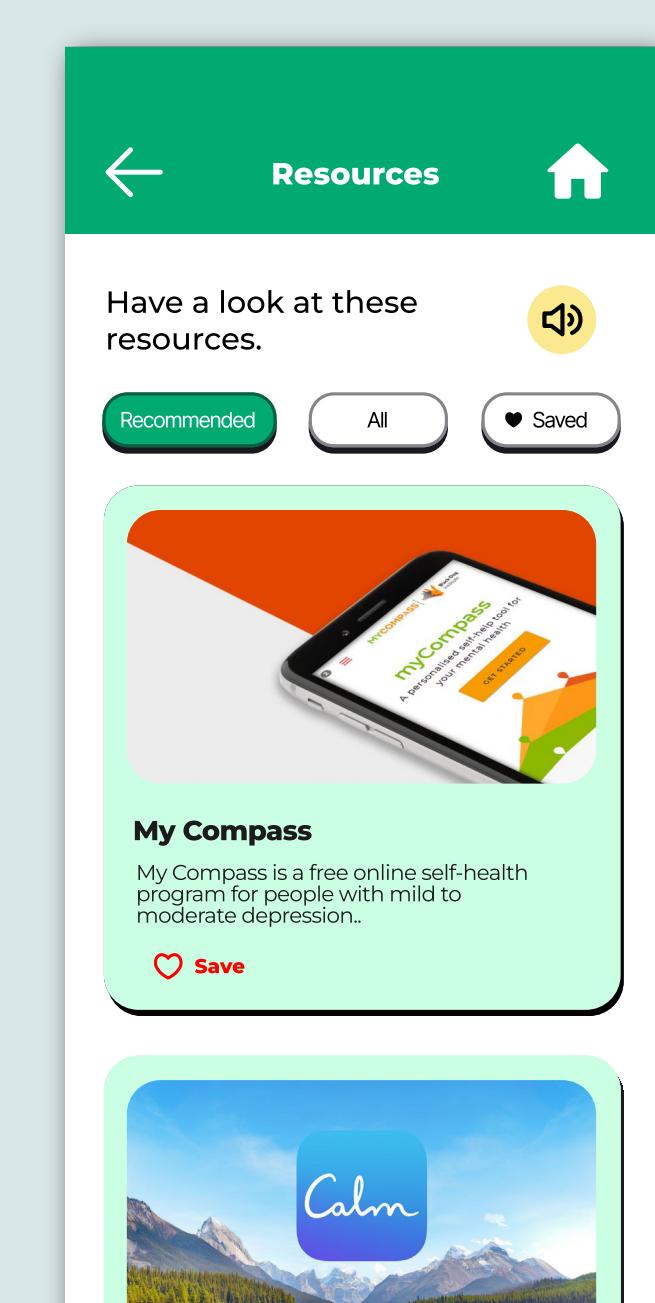

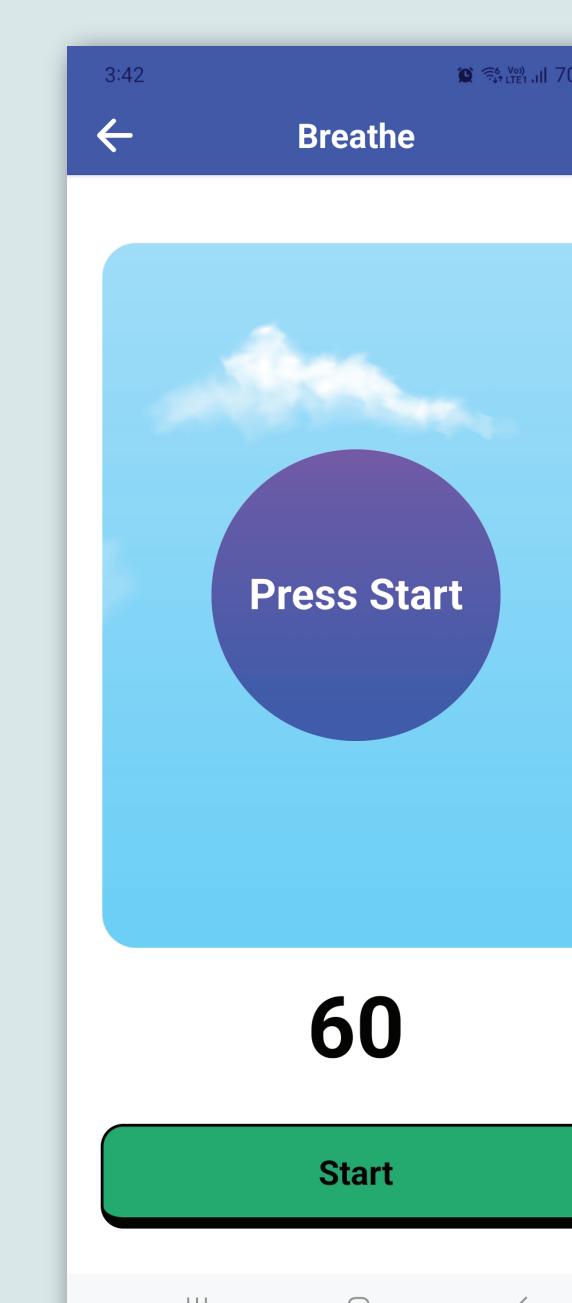

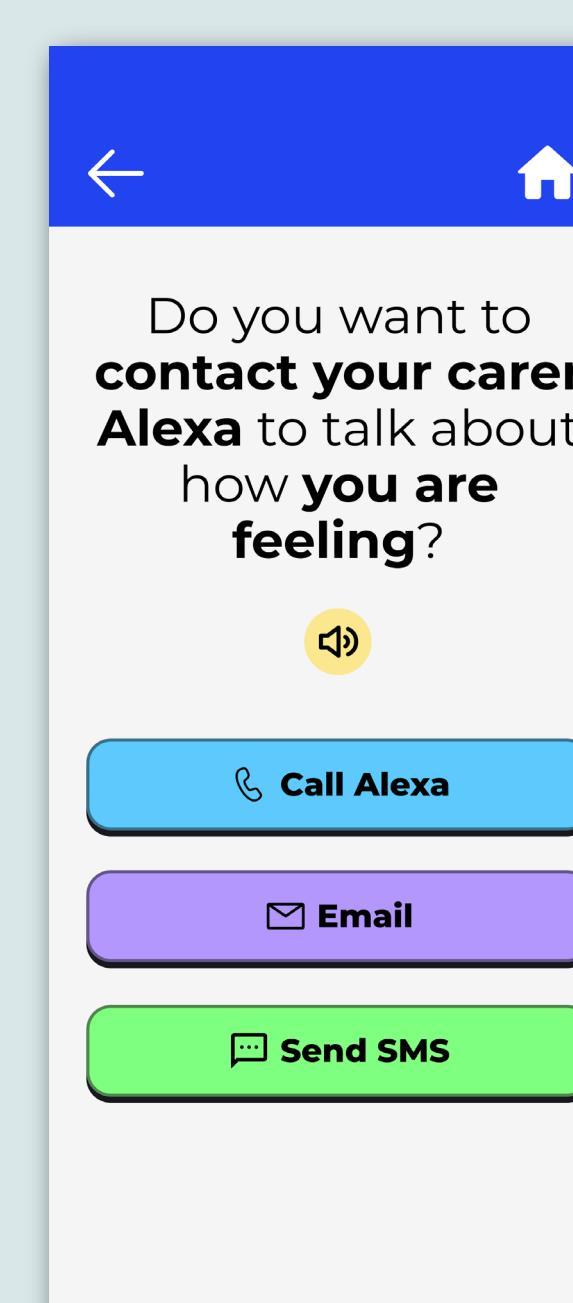

Choose from different faces.

View and share results:

Mood Tracker makes suggestions if your mood is low.

Next: We will test Mood Tracker to see how it helps people.

The Mood Tracker is part of the **Communication Connect** project

It is funded by the Australian government.
